A wide variety of safe, compliant storage options for corrosives make steel cabinets a popular choice.

Justrite Steel Cabinets come in standard 114, 170 and 227 litre sizes as well as Slimline, Compac, Countertop, Undercounter and Piggyback styles. All models have the same quality features as Justrite's flammable cabinet, including double-wall construction, dual vents, earthing wire connections, adjustable shelves, leakproof sills, three point self-latching doors and levelling feet. To resist aggressive chemicals, acid cabinets also include polyethylene trays attached to galvanised steel shelves and a separate polyethylene liner for the bottom sump. The liner can be removed for easy cleaning of drips and leaks. The popular 114 litre two-door cabinet also includes an extra polyethylene top work tray which can be secured to cabinet top for a handy work surface. An all epoxy baked-on powder-coat finish, inside and out, provides increased chemical resistance. Paint is exclusively formulated to resist the acids, bases and solvents often used in laboratories.
