

Environmental Products

Justrite superior spill containment systems offer innovative design and protect workers and the environment!

Customise and protect work stations.

Low Profile Gator® Accumulation Centres are only 140 mm high for easy handling of drums. They are the economical choice for containing spills during drum filling and dispensing operations, and ideal for chemicals or battery storage. "Gator-Tuff" seamless construction in 100% polyethylene eliminates leaks and is nearly impervious to chemicals, including acids and corrosives. Sturdy, self-locating grates eliminate the chance of ride-up and are removable for easy cleaning.

Companion Ramp facilitates loading and unloading of heavy drums and features anti-skid ribs for maximum safety. It can be conveniently located anywhere, on any size centre. Combine 2, 4, 6, and 8-drum modular units to create your own customised system. As capacity needs increase, use optional **Joining Clips** to firmly lock units together and expand your storage space. Sumps remain separate and clips can be removed for easy repositioning. In applications calling for a continuous sump, optional **Sump-to-Sump™ Drain Kit**, (including joining clips and transfer tube) allows you to join centres together, on-site, for full compliance with regulations when combined sump capacities reach 250 litres.

Build your own customised system!

With the Sump-to-Sump™ Drain Kit, join accumulation centres together to expand sump capacity and meet local environmental requirements.

Easy to install
