

# Safety Containers

*Justrite high performance Safety Cans...  
hard working, dependable and the easiest to use!*

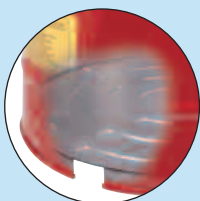

Unique Counterbalance Design – Justrite’s ergonomic design leverages the weight of liquid against opening mechanism for effortless pouring. Bottom grip lip secures hold of heavy loads.

Leakproof, airtight self-closing cap is fitted with a long-life gasket and opens wide for easy filling.

Internal dual-density flame arrester within the fill/pour spout dissipates heat to prevent fire from flashback ignition. Full length allows secure insertion of fuel nozzle.

13 mm raised bottom resists accidental punctures when placed on uneven surfaces and doubles as an easy hand-holding support when pouring.

Full-fisted grip on swinging handle makes it easy to pour and carry heavy loads of 27 kg or more.

Rugged, 0.5 mm, premium-coated steel construction is chemical-resistant to handle petroleum, diesel fuel, kerosene and a variety of other chemicals.

Spring-loaded, self-closing lid controls vapours and automatically closes after filling or pouring to guard against dangerous spillage.

Positive pressure-relief cap automatically vents between 0.2 and 0.35 bar to prevent rupture (or explosion) in the event of fire.

Durable, high gloss powder-paint finish resists solvents, acids and alkalis and minimises the effects of corrosion and humidity.

Rounded handle for comfortable carrying.

Safe-Squeeze® trigger allows precision control of liquid flow.

Double-lock seams at base and top offer four thicknesses of steel for extra “bumper guard” protection against accidental bumps and bangs.

Flexible metal hose for smooth accurate pouring.

- **EXCLUSIVE TEN-YEAR WARRANTY**
- **GUARANTEED 100% LEAKPROOF**  
Each and every container is tested under pressure to guarantee leakproof construction. Rigorous drop-testing from one metre onto a concrete surface further tests the can’s integrity and offers an additional measure of assurance that the container meets Justrite’s high performance standards.

Complies with US safety codes, OSHA 29 CFR 1910.106 and NFPA Code 30 requirements; FM Approved, UL and ULC Listed

Special Reinforcing Ribbs – Justrite’s manufacturing process adds a set of reinforcing ribs to strengthen the side walls for extra “bumper guard” protection in tough environments.
